

# Silo for Research Analyst Pack

## Feature suite to enhance analyst productivity

The Silo for Research Analyst Pack is a suite of productivity enhancement features for analysts. It includes the following three add-ons offered on a per analyst basis:

### Collector: schedule and automate repetitive collections

[Collector](#) is an automated collection extension for analysts, providing the following capabilities:

- Collection scheduling, including recurring collection (e.g., daily, weekly, time of day) via an intuitive UI
- Scheduled collection tradecraft for the surface and dark web including customized browser fingerprint; mobile device emulation; and in-region Internet access and time zone
- Automated out-of-band translation for visual collections from international sites
- Access to an advanced video downloader
- Scheduled content collections downloaded to Authentic8 Secure Storage outside the organization perimeter

### Gofer: execute multi-search workflows

[Gofer](#) allows analysts to configure and execute multi-search workflows seamlessly. It offers a set of preconfigured websites and workflows which can be customized and enhanced to fit any type of investigation.

- Easily create and modify workflows for any type of search
- Find the right workflows for any investigation using a context-aware, right-click menu and copy/paste search box
- Import/export workflow configurations and share workflows with others on your team
- Review all searches during an investigation using the built-in audit trail

### Trailhead: visual audit trail for analysts — coming soon!

The upcoming Trailhead feature is an extension that allows analysts to maintain a visual audit trail of every website and action taken in an investigation.

- Screenshot of web pages visited and in-platform audit trail viewer
- Metadata captured of when and how you arrived at a given page
- Create a new investigation or continue “recording” on one that already exists
- Non-repudiable output available
