Drug Dealers Using Social Media to Sell Illegal Narcotics

The rise in social media over the past ten years has led to drug dealers using various social media platforms to sell illegal narcotics on the open web. Investigators need a safe and anonymous web browser that allows them to investigate social media drug dealers without the risk of being identified or infecting their endpoint with malicious web code. This workflow will cover how Silo Research Toolbox, Authentic8’s cloud browser and managed attribution solution, can be utilized to identify and investigate social media drug dealers anonymously.

Silo Research Toolbox

Silo Cloud Browser is the foundation of Toolbox; it is a one-time-use browser built on-demand in a secure cloud-based container. All web code is rendered in the cloud and converted into a high-fidelity remote display of the session, protecting endpoints from malware, ransomware, and drive-by downloads. All web activity is logged. Privileges to upload/download and to access restricted URLs are policy controlled.
**Silo Research Toolbox** is a managed attribution and research suite layered over Silo. It allows users to spoof IPs to over 30 locales worldwide, manipulate their hardware and software fingerprints, and to collect, annotate, and store internet-based publicly available information (PAI). It includes tools for post-fetch language translation, web-code and traffic analysis, and linkage tracking.

### Identifying and Investigating Social Media Drug Dealers with Silo Research Toolbox

The first step when conducting an investigation using Silo Research Toolbox is to select a regionally appropriate Toolbox egress location and a user agent string that matches regional norms. This workflow will use the US East Toolbox and Google Chrome running on a Windows 10 machine as the user agent string. This process allows investigators to blend in as a local of that area.

When conducting research on social media there are various data capture tools included with Toolbox that can be used for gathering intelligence. This first is a video download tool; this tool allows investigators to simply download any video currently playing on their screen to save as evidence. The second is a screenshot tool that gives investigators the ability to take a screenshot of an entire page. The screenshot tool also gives investigators the ability to edit the screenshot by including boxes, arrows, and text to highlight important information, as well as the ability to include the URL of where the screenshot was taken. This allows investigators to easily return to that page to gather additional intelligence.

By conducting a search on Twitter for #xanax, the Twitter user @phillipeguz was identified as an account using Twitter to market and sell illegal narcotics. Shown on this profile is information on how to place an order; the information listed includes a website, email address, and phone number. This information can now be run through additional search engines to possibly identify the owner of the account.
Resources for Site Ownership Research

**WHOIS Records:** WHOIS records provide top level domain information such as exact dates of registration, addresses, names, and phone numbers associated with the domain. Additionally, it provides web host information. @phillipeguz posted the website [https://cannabisbozz420.wixsite.com/weed/about](https://cannabisbozz420.wixsite.com/weed/about) on their Twitter feed as a location to purchase the illegal narcotics. Using [https://urlscan.io](https://urlscan.io), a report was generated for this site.
Breakdown of URLscan.io result panels:
1. “Summary” provides a top level summary of what country the site is hosted in.
2. “HTTP” details how many HTTP connections are made during initial load.
3. “Links” details what other sites are linked to on the main page.
4. “IP/ASN” details the IPs of everything used upon initial load and the geographic location as well as ASN.
5. “IP Detail” contains the exact city/state/country an IP address is assigned to, and redirects.
6. “(Sub)domains” identifies how many subdomains a top level domain contains.

Example analysis of result panels:

According to the generated report, https://cannabisbozz420.wixsite.com/weed/about uses hosting primarily in the United States but also has hosting in Germany. This means that the distribution could also include locations outside of the United States. When conducting further analysis on the website, the site owners listed packaging locations in the United States, Germany, Australia, New Zealand, Switzerland, Sweden, Ireland, and Poland. The following screenshot was taken from their website depicting their packaging locations around the world. When looking at who registered the domain it appears that the domain was registered by godaddy.com. This information could be used to send out a subpoena or court order to godaddy.com to find out who registered the domain with them.

Phone Number Reverse Lookup

The phone number 1+802-438-8671 was also listed as contact information for ordering narcotics from this Twitter page. Having this number available is extremely valuable for the investigation. The number can be run through a reverse phone number search engine to identify the subscriber information. The following screenshot is from a report generated by https://www.whitepages.com/phone/1-802-438-8671 for the listed phone number.
Example analysis of result panels:

Although there is no identity listed for the number and the number is listed as a voice over internet protocol (VoIP), there is some valuable information that can be pulled from the report. Seeing that the number has a Rutland, Vermont area code is very interesting due to the website listing a packaging location on the East Coast, it is possible that the East Coast is their shipping HQ.

Searching for Additional Social Media Profiles by Email

The third piece of contact information listed on this Twitter page is the email address kushgreens345@gmail.com. Once a possible email address is identified for a target, it can be run through https://verifyemailaddress.com to verify that it is a legitimate email address. Once an email address is verified, a subpoena or court order can be sent to the email provider to identify who owns and operates that email address. The screenshot below depicts the results from https://verifyemailaddress.com for the email address kushgreens345@gmail.com, and it is in fact a legitimate email address.
Conclusion

With the increase of drug dealers utilizing social media to distribute illegal narcotics, investigators need a safe and anonymous method to investigate and capture social media data. This workflow covered how Silo Research Toolbox can be used by investigators to safely and anonymously investigate and capture data from social media drug dealers.
